

For Quick, Efficient
and Intelligent

Security Deployments

Implementation Solutions

Overview

In the evolving landscape of cyber security & growing menace of threats every year various new technologies & controls are added to the catalogue of the customer buying options and also more product vendors are added to existing portfolio of products. The situation makes it difficult for the customers to achieve the desired objectives without the assurance of seamless integration of the existing & to be newly incorporated to solutions. Moreover there are fast moving transformations in the business models & respective IT adaptations, like DevOps & Containers, Server-less Computing, Artificial Intelligence, Virtual & Augmented Reality, Network Functions Virtualization (NFV), Software Defined Networks (SDN), BlockChain based FinTech models, etc. The role of the Systems Integrator (SI) or Professional Services Partner (PS) is key to the successful and working strategy of Cyber Security in the organization. The role of PS partner is no more limited to installing & configuring the respective OEM product/solution, but also ensuring the integrated fabric of solution delivering the comprehensive results. This expectation can only be met with a combination of the desired skills of system integration, scripting capabilities and also an attitude to Systems Integration as a whole with a mission of achieving the desired objectives.

Having a rich experience in Check Point R&D, Cisco Solutions, VMWare, ArcSight, RSA, and Splunk Analytics solutions by the virtue of the founders & senior management of QOS Technology in their erstwhile positions, QOS

Technology is an apt partner of choice for the customers that look for the trusted and technical competent PS Partner. In the 7 years history of business, QOS Technology has won Global Awards of best partner for Check Point and also the development partner of Splunk Inc. It enjoys the highest competencies & self-sufficiency of designing, installing & integrating the complete stack of security solutions Check Point Software Technologies products, Splunk, HP ArcSight, & CyberBit Solutions and support the integration with VMWare, Cisco, Microsoft Orchestration platforms. QOS enjoys a rich experience of implementing various multi-vendor projects in the mission mode setups where the available downtime windows are virtually not available beyond 15-30 minutes.

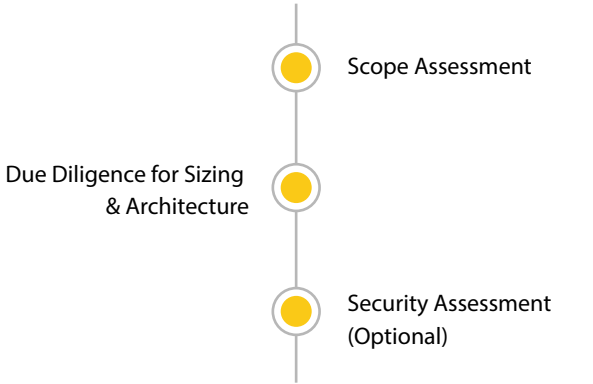

QOS Technology has high percentage of the satisfied customers to the likes of largest telecom providers, large public sector & private banks, Government Data Centers, largest Stock Exchanges, large IT/ITES companies, in India and also in Nepal, Bangladesh, and Sri Lanka. QOS Technology believes in limited number of OEM Partnerships rather than carrying most of the Cyber Security OEM Vendors' products in order to ensure deep dive learning curves for each of the alliance partner and thus bringing maximum value for the customer for the investments. Also there is a strong focus on consistent training models for skills upgrade & cross pollination.

Methodology

Making enterprises secure requires a careful consideration and years of experience to plan, design and deploy intelligent solutions which not only ensures safety of your critical information and assets but also makes your organization resilient to fight back any unwanted threat and prevent direful business consequences. Our Professional Services Team is capable of delivering top-notch solutions equipped with level-best ability to design, deploy and optimize best security measures.

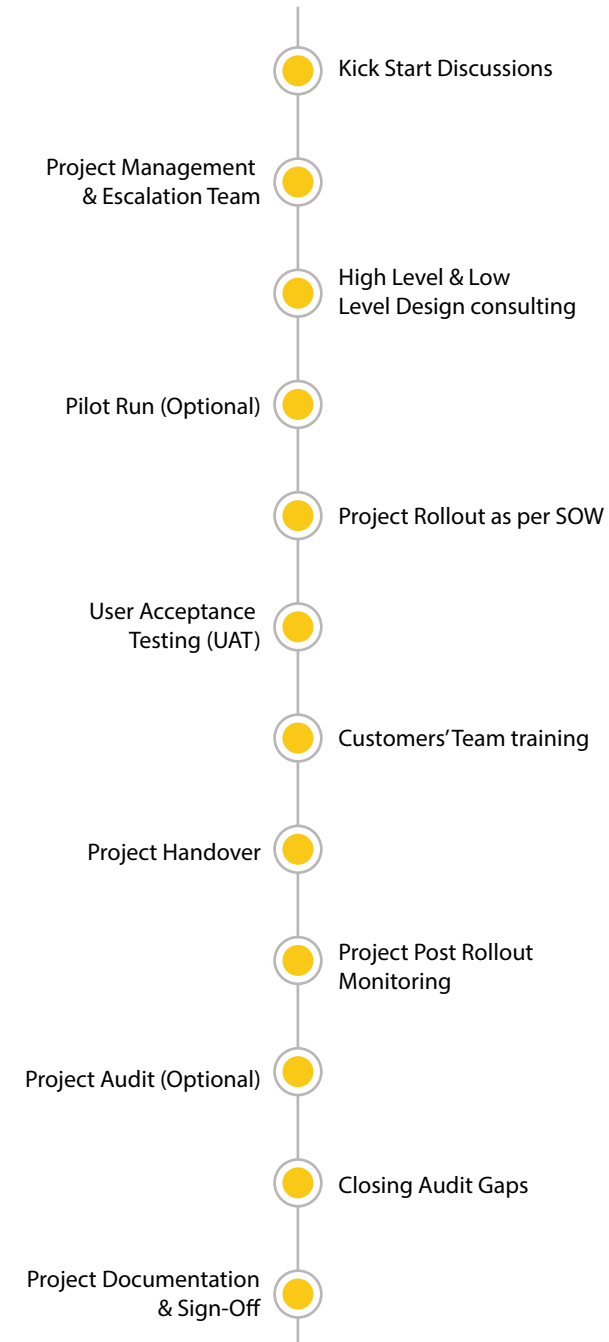

Before Project Work Order

Understanding your existing infrastructure and already deployed security measures is essential before we plan any execution. Our approach starts with following assessments:

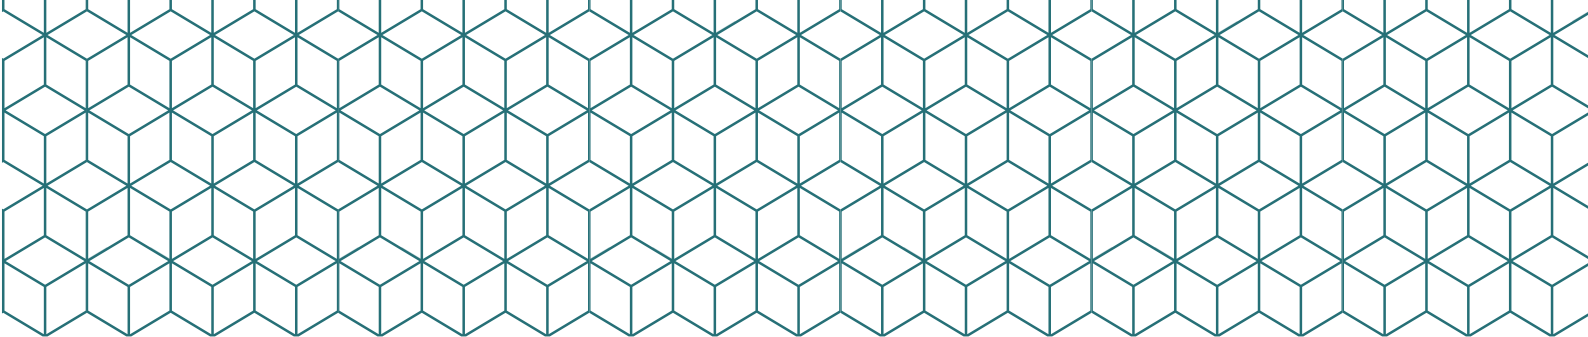

After assessing the Infrastructure and other security measures, we delve little deeper to get a clear understanding of objectives and security requirements.

Post Project Work Order

Project Documentation & Sign-Off

Diverse Skills for Intelligent Deployments

Our diverse skill set around Information Security, Analytics, Enterprise Application Development, and consultancy makes us an easy choice for biggest organizations and Government agencies to shape their security measures. We have a successful track record of delivering best security solutions using state of art technologies and our inhouse award winning products. Our Team is also proficient at following technologies:

Furthermore, we cater variety of Security Design, Deployment and operational requirements for efficient and effective security measures in practice.

35% Software Development and Scripting

Nearly 1/3rd workforce of QOS Technology is equipped with the Software Development & API Scripting capabilities being adroit at tools like Python, R, JavaScript, PERL & CGI.

80% Security Implementation and Support

80% of QOS Resources are Check Point Certified with variety of Certifications, This team has overlapping skills of other Analytics Tools like ArcSight, Splunk, Scripting with Python & R.

50% Professional Services

More than 50% of QOS Resources are skilled on Purple Team services for running Advance Penetration Testing, Security Consulting, Anti-Phishing Campaigns, etc. with the overlapping skills of Security Implementation & Scripting with Python/R.
